

GALACTIC

On 15th August 2008 I was one of just 25 travel advisors from the US given a behind the scenes tour by Burt Rutan and Brian Binnie of Scaled Composites, the company that won the 10 million dollar Ansari X-Prize in 2004 for sending a man to space and back twice in just six days with a re-usable and privately funded spaceflight system.

Scaled Composites are now building SpaceShipTwo and WhiteKnightTwo, the revolutionary vehicles that will be taking commercial passengers to space in just a few years time.

During the tour I was given a private viewing of WhiteKnightTwo, the world's largest completely carbon composite aircraft purpose built for spaceflight launch and one of the most fuel efficient aircrafts on Earth.

If you would like to find out about the ultimate life experience then please contact me and I will be delighted to share my knowledge with you...
